

Scribo helps all University students write better English

Description

university students all write well – right?

•

The big challenge

-

How Scribo helps

University faculties do not want to teach English writing

So many universities lament having to provide written English support to students to help get them through their course.

The expectation is that when students make the grade for University, they can write at an academic level. Nurses, for example, are expected to know and use medical terms and be able to recount clear patient observations at the least.

Alas, this is not the case. University students everywhere are a product of many primary and secondary education systems that suffer from a lack of English teaching resources. The problem just moves up the line, or as some universities say, crosses the road from schools.

The key problems faced by Universities include:

1. Needing to provide English writing support and extension classes is a time-consuming and expensive pursuit. Additional English instructors are needed.
2. Tutors spend hours correcting English when it is not their job to do so.
3. The lack of written English skills becomes a bottleneck in student progression. Universities need to get students through courses without compromising standards.

How scribo helps

Personalise student feedback – help students ‘at risk’

- Students have a single place to check their writing for any subject they are working on.
- Feedback focuses on 8 levels of guidance, way more than simple Grammar, Punctuation and Spelling checks.
- All feedback is personalised to the level of writing the students are producing.
- Students are guided by vocabulary lists and subject-specific terms and collocations, to help them write ‘on-subject’ with the right terminology.
- Scribo lifts academic word choices and offers cleaner ways to present ideas, without forcing rewrites and over-suggested text alternatives.
- Scribo can connect tutors into the drafting and feedback loops, reducing the latency of feedback.
- Universities can use Scribo to scale English support services and monitor students ‘at risk’ of not making the grade. Interventions are quicker and more informed.
- Tutors are no longer expected to contribute to basic English correction as students have more ownership in their writing.

Nowadays, most people believe that educational institution should spend more and more time learning students traditional subject. On the other hand, the rest of us think that schools and universities give enough time to teach pupils educational materials, which used it when they are searching for jobs. I totally agree with the second statement, which says that students have to learn what they will use in their future work.

However, some schools specially the public schools prefer to give traditional subjects, such as History, Biology, Geology and Math. they think that these syllabi could help to build up the character of their learners, however these issues just teach students the general knowledge without preparing them to the real work live. On the second hand, the privet schools think about their students` career in the near future. For example, when we ask our grandparents about their school`s subjects, they immediately reply to us that they were learnt the traditional subjects, and these were not helping them in their work. they enrolled on many courses to know about work skills.

So, schools and universities must teach their pupils job skills like communication skills, that will help employees to communicate with each other and with their
